Report:

- * ** ***

Is the report easy to understand?
Is it well structured?
Is the report well formatted?
Are all methods explained?
Are the figures useful?

<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Explanation:

Note: in our review we consider '***' as the best score and '*' as the worst score.
Code:

- The LR and NB models experiment graphs are not showing correctly.
- The variable names are relatively easy to understand, they are mostly shortened form of a term or convention, but not always.
- The documentation is good. Without it, it would have taken much longer to understand what each line suppose to do (especially for people that are new to python).

Report:

- It's really impressive that team 24 have looked at the data and decided what is relevant to their problem and to the methods that they want to use and what data is not relevant or could potentially harm their results. Shows very good understanding of the topic.
- Data extraction and manipulation is explained very thoroughly and in an understandable manner.
- The data visualization is very helpful to the reader in understanding the data-set. Good idea.
